I own and operate Larson's Shipyard in Newport Beach, Ca. In addition, I own and operate additional maintenance, repair, sales, mechanical business's and I am the West Coast Distributor for CermaMarine.

I have watched the results of using this product on a number of boats in addition to all of our personal vehicles. Incredible and Green Friendly. I have in every event upon a Cerma treatment not seen anything but astonishing results. I noticed less vibration of the engines, especially in my Corvette Z06! I have experienced results of emission tests that were very impressive.

I think the most eye opening experience I have had with CermaMarine is when my technicians treated twin Crusader Marine engines as well as the transmissions. After approximately 3 trips from Newport Beach to Catalina Island, the vessels oil coolers blew hence the oil was not present in one engine at all. The vessel arrived home 27 miles away and as a result of CermaMarine, the engines did not overheat and the repair consisted of 2 new oil coolers, not 2 new Engines! Amazing.

I recommend this product to all boaters if not only to give to your engine, but as well as give to your environment.

Hi to All. I have been asked to tell you what I think of Cerma. I have treated a few boats of different types and power including Orange County Harbor Patrol boats. I don't get to spend a lot of time on the boats that I treat after I treat them, but I do notice a difference in the way they run after being (CERMAFIED). There is not a lot more to say other than it works!

Dick Andrews
Cerma Technician @ Larson's Shipyard
Former US Navy large Diesel Mechanic

As tested by Depth Perceptions Inc. OC Sheriff Patrol effectively decreased Hydrocarbon (Unburned fuel) emissions by over 300%

Hi, I've been working on marine engines for the last 18 years, spent 12 years in Dubai and the rest was here. I could not believe the effect cerma has on the engines that we treated, it reduces vibrations and smoke. I am sure Cerma will also be loved in Dubai because of their extreme weather. It will surely reduce stress on their engines.
