Dear Terry -

Just a quick note to tell you what Cerma has done for my trucks.

We put Cerma in the whole system of one truck with 798,000 miles, engine (470 Detroit), transmission, and both rear axles. Within 50 miles 95 % vibrations were gone, stack smoke was all but gone, and pulling first load with 68,000 lb. payload, said truck walked off from a truck carrying same load that usually out performs treated truck. I haven't gotten monthly report from fuel to give increase of fuel mileage - will report on that later. Also sealed oil leak on compressor head.

Second truck treated, has 1,500,000 plus miles, was basically parked in grass retired. Compression was low enough that either had to be used to start. Front bumper had 1.5 inch vibration both ways before treatment, and mirrors would have to be held to see clearly backing up. After treatment, truck will start without either, hence more compression, less than 1/16th inch bumper vibration both ways, and mirrors do not vibrate. Minimum stack smoke.

This Cerma product is awesome stuff!
